# **Toolkit Applications**

Navigation and Ancillary Information Facility

Toolkit applications create or manipulate kernels, or perform other functions such as time conversion. Each of these is included in the generic Toolkits.

- Time conversion tool: chronos
- SPK generation tool: *mkspk*
- SPK merge and subset tool: *spkmerge*
- Kernel summary tools: *brief, ckbrief, spacit*
- Comments manipulation tools: commnt, spacit
- File format converters: tobin, toxfr and bingo

Navigation and Allemary Information Facility

# *chronos* is an application that provides a flexible interface to the SPICE Toolkit time conversion capabilities.

# *chronos* supports time conversion between the following time systems/types:

Supported Time Systems	> Supported Time Types
Universal Coord. Time (UTC)	> SCET, ERT, ETT, LT
Ephemeris Time (ET)	> SCET, ERT, ETT, SECONDS, LT
S/C On-board Clock Time (SCLK)	> SCLK, HEX, TICKS
Local Solar Time (LST)	> LST, LSUN

**Toolkit Applications** 

3

# CHRONOS - Input/Output Matrix

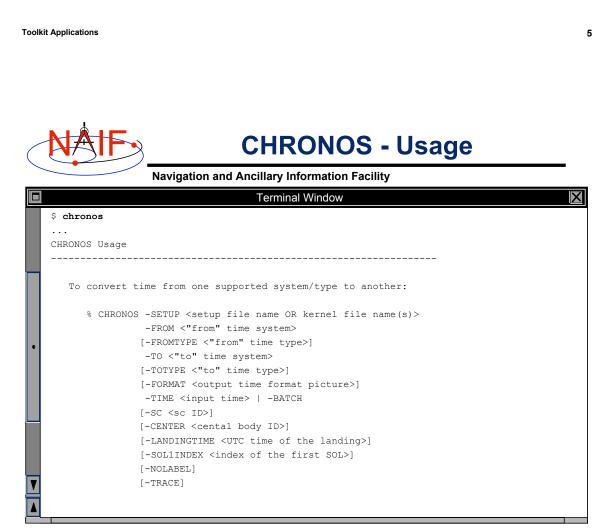

Input System/Type	e	Output S	System/Type
	-		
UTC / SCET	(*)	UTC	/ SCET (*)
UTC / ERT		UTC	/ ERT
UTC / ETT		UTC	/ ETT
et / scet	(*)	UTC	/ LT
ET / ERT		ET	/ SCET (*)
ET / ETT		ET	/ ERT
ET / SECOND	S	ET	/ ETT
SCLK / SCLK	(*)	ET	/ SECONDS
SCLK / HEX		ET	/ LT
SCLK / TICKS		SCLK	/ SCLK (*)
lst / lst		SCLK	/ HEX
		SCLK	/ TICKS
		LST	/ LST (*)
(*) default input/output t	ypes	LST	/ LSUN

**CHRONOS - Miscellaneous** 

Navigation and Ancillary Information Facility

- chronos normally converts one input time but can run in batch mode to speed up conversion for multiple input times.
- OS shell alias capabilities can be used to define shortcuts for commonly used time conversions.
- · chronos has an extensive User's Guide.
- *chronos* will eventually be offered as a subroutine as well.

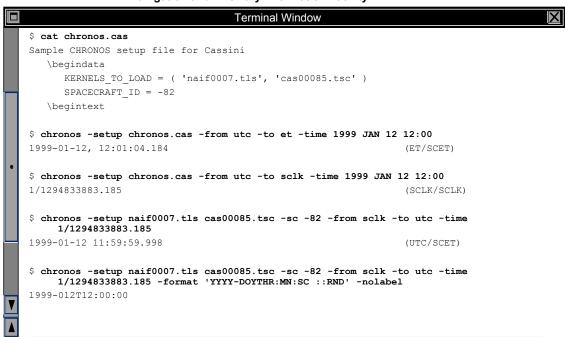

**Toolkit Applications** 

# **CHRONOS - Example**

Navigation and Ancillary Information Facility

**Toolkit Applications** 

- *mkspk* may be used to generate an SPK file from any of several types of data, such as discrete states, classic elements, and two-line elements
- Use of this program is discussed in a separate tutorial about making SPK files, and in the *mkspk* User's Guide.

### **SPKMERGE**

Navigation and Ancillary Information Facility

- The contents of an SPK file or set of SPK files may be merged or subsetted using spkmerge
  - Extract an interval of time of interest from a single SPK file or a set of SPK files.
  - Extract data for one or more <u>objects</u> from a single SPK file or a set of SPK files.
  - You can combine both the time and object selection mechanisms for the greatest flexibility.

**Toolkit Applications** 

 SPK files created with spkmerge have no overlapping ephemeris data. The order in which the source files are specified determines precedence when sources have overlapping coverage for a body of interest.

 IMPORTANT NOTE: Data from an earlier specified source file take precedence over data from a later specified source file when the new (merged) file is created.

## **SPKMERGE - Example**

Navigation and Ancillary Information Facility

	Terminal Window
	<pre>\$ cat spkmerge_cas_example.cmd ;This command file directs spkmerge to take data for ;Cassini, the Sun, the Earth, the Moon, and the Earth- ;Moon barycenter and place them into a single SPK.</pre>
	<pre>leapseconds_kernel = naif0007.tls spk_kernel = output.bsp bodies = -82, 10, 301, 399, 3 source_spk_kernel = de403s.bsp source_spk_kernel = 990825A_SCEPH_EM52_JP0.bsp</pre>
•	\$ <b>spkmerge</b> SPKMERGE SPK Merge Tool, Version 3.2, SPICE Toolkit N0057
	Enter the name of the command file
	> spkmerge_cas_example.cmd
	Creating output.bsp
	\$

**Toolkit Applications** 

The contents of binary kernels can be summarized with the kernel summary tools.

- Use *brief* to find the bodies and associated time coverage contained in an SPK file or set of SPK files.
- Use *ckbrief* to find the structure(s) and associated time coverage(s) stored in a C-Kernel or set of C-Kernel files.
- Use spacit for a segment by segment summary of the contents of a CK, SPK, binary PCK or EK/ESQ.
  - The program *spacit* also identifies the SPK or CK data type for each segment.

Using brief - 1

Navigation and Ancillary Information Facility

The utility *brief* provides a simple command line interface to summarize the contents of SPK files.

• Use *brief* to quickly determine what bodies are present in an SPK file or set of SPKs.

\$ brief spk.bsp or \$ brief \*.bsp

 Find all the bodies in an SPK file for which there is coverage at an epoch or during an interval of time.

```
$ brief -at `7/25/99' spk.bsp or
$ brief -from `7/25/99' -to `8/1/99' spk.bsp
```

 Find out which SPK files contain coverage for a particular body.

\$ brief -CASSINI spk.bsp

(Note: brief will only display body <u>names</u> that are hard-coded within SPICE library software because BRIEF can't load a text kernel containing a new name-to-ID mapping)

**Toolkit Applications** 

NAIF

Using brief - 2

- To show the central body around which each target moves, use the '-c' option.
- If you want to treat a group of SPK files as an ephemeris set, rather than individual files, use the '-a' option.
- To display results in a tabular format use the '-t' option.
- Options may be provided in any order on the command line.
- The times displayed by *brief* are given in calendar format ET (TDB), which is not the same as UTC
  - ET currently differs from UTC by approximately 64 seconds.

**Toolkit Applications** 

**Navigation and Ancillary Information Facility** 

### ckbrief is a simple command line program for summarizing the contents of CK files.

• Use *ckbrief* with just file names to quickly list the structures whose pointing is stored in one or more C-kernels.

```
$ ckbrief ck.bc or $ ckbrief *.bc
```

 If you want to view coverage using SCLK times you need to also provide an SCLK kernel and specify the '-sclk' option.

```
$ ckbrief sclk.ker ck.bc -sclk
```

 If you want to view coverage using UTC times you need to provide both SCLK and LSK kernels and specify the '-utc' option.

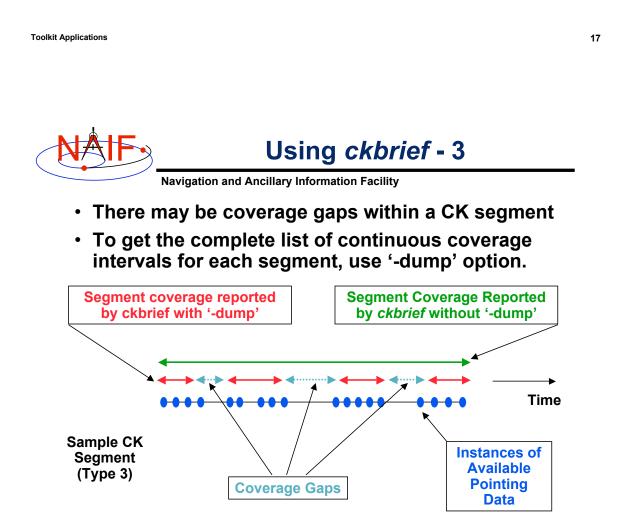

\$ ckbrief sclk.ker naif0007.tls ck.bc -utc

The names of the kernel files and the options used may be • provided in any order and placed anywhere on the command line.

### Using ckbrief - 2

- Use the NAIF instrument ID to find out which files in a set of C-kernels contain pointing for the instrument of interest.
  - \$ ckbrief -82000 \*.bc
- Use the '-rel' option to find out to which frames the pointing is relative.
  - \$ ckbrief -rel \*.bc
  - Frame kernel(s) may also be provided on the command line to make *ckbrief* display frame <u>names</u> rather than IDs in the 'relative to' column.
- A number of other options are also available

Summarizing CKs with UTC and SCLK **Navigation and Ancillary Information Facility** X **Terminal Window** \$ ckbrief -sclk 981116\_981228pa.bc sclk.ker CKBRIEF Version: 1.0.0, 1999-09-09. **Toolkit Applications** 

Using spacit

Navigation and Ancillary Information Facility

- spacit may be used to obtain a more detailed summary of an SPK or CK file than that offered by brief or ckbrief, respectively
  - spacit may also be used to summarize a binary PCK or an EK/ESQ.
  - spacit is an interactive program
    - » It will prompt you for all needed inputs
    - » It displays short menus where you choose the action desired
- spacit may also be used to manage comments, and to convert between binary and transfer format

**Toolkit Applications** 

# **NAIF** Comment Manipulation Tools

- Every kernel produced with the SPICE Toolkit should contain metadata – called "comments" – describing the file contents, intended usage, etc.
- In binary kernels SPKs, CKs, binary PCKs, and EKs – comments are stored in a special area of the file called the "comment area."
- To read, extract, add or delete comments stored in the comment area, use the Toolkit utility commt.
  - Caution: you cannot add or delete comments if the kernel file is not in native format for the machine on which you're working.
  - You can convert a non-native binary format file to native binary format by converting the file to "transfer format" using *toxfr* and then converting it back to binary format using *tobin*.

### Using commnt - 1

Navigation and Ancillary Information Facility

- *commnt* is both a command line utility and an interactive menu-driven program.
- To dump the comments from a binary kernel to the terminal using the command line use the '-r' option:
  - \$ commnt -r kernel\_file
- To extract the comments from a binary kernel to a text file use the '-e' option:
  - \$ commnt -e kernel\_file text\_file
- To add or append new comments to a binary kernel, place them in a text file and use the '-a' option:

\$ commnt -a kernel\_file comment\_file

These are appended to any previously added comments

**Toolkit Applications** 

Using *commnt* - 2

Navigation and Ancillary Information Facility

 To delete comments from a binary kernel use the '-d' option:

\$ commnt -d kernel file

- Comments should only be deleted when they are to be replaced with updated information.
- All of the command line features of *commnt* are supported by the interactive invocation.
  - To run *commnt* interactively, type the utility with no command line arguments:
    - \$ commnt

## Using commnt Interactively

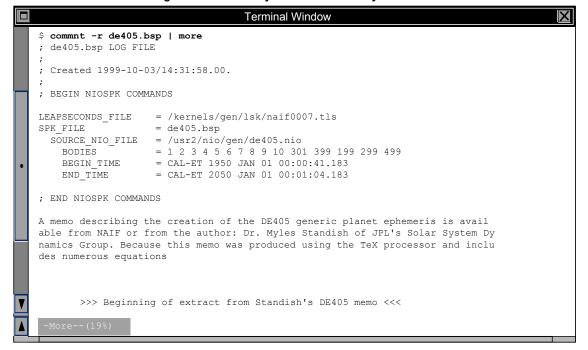

Navigation and Ancillary Information Facility

	Terminal Window
	\$ commnt
	Welcome to COMMNT Version: 6.0.0 (Spice Toolkit N0050)
	COMMNT Options
٠	<ul> <li>(Q) Quit.</li> <li>(A) Add comments to a binary file.</li> <li>(R) Read the comments in a binary file.</li> <li>(E) Extract comments from a binary file.</li> <li>(D) Delete the comments in a binary file.</li> </ul>
	Option: E
	Enter the name of the binary file.
	Filename? de405.bsp
	Enter the name of the comment file to be created.
	Filename? de405_comments.txt
	The comments were successfully extracted.

**Toolkit Applications** 

**Navigation and Ancillary Information Facility** 

### **File Format Conversion**

Navigation and Ancillary Information Facility

- With modern Toolkits (N0052 and later) the porting of binary kernels between computers having dissimilar binary standards is usually not necessary.
  - The advent of binary kernel readers that detect the binary style and do run-time translation if needed generally makes porting unnecessary.
  - Refer to the "Introduction to Kernels" tutorial for more on this topic.
- If true porting is needed (because you must modify or merge kernels):
  - use *toxfr* on the source computer and *tobin* on the destination computer
  - or use bingo on the destination computer
    - » NOTE: bingo is NOT available in Toolkits; it must be downloaded from the NAIF website

**Toolkit Applications**
