Time Systems and Kernels

Navigation and Ancillary Information Facility

- Time inputs to and outputs from user's programs are usually **strings** representing epochs in these three time systems:
 - Ephemeris Time (**ET**, also referred to as Barycentric Dynamical Time, **TDB**)
 - Coordinated Universal Time (**UTC**)
 - Spacecraft Clock (**SCLK**)
- Time stamps in kernel files, and time inputs to and outputs from SPICE routines reading kernel data and computing derived geometry, are double precision **numbers** representing epochs in these two time systems:
 - Numeric Ephemeris Time (TDB), expressed as ephemeris seconds past J2000
 - Encoded Spacecraft Clock, expressed as clock ticks since the clock start
- **SPICE** provides routines to convert between these string and numeric representations.
- A time string used as an argument in a SPICE API must be provided in quotes.
 - Fortran, Matlab and IDL: use single quotes
 - C: use double quotes

Converting Time Strings

Navigation and Ancillary Information Facility

- **UTC, TDB, or TDT (TT) String to numeric Ephemeris Time**
 - **STR2ET (*string*, *ET*)**
 - » **Converts virtually any time string format known to the SPICE Time subsystem, excepting SCLK. For example:**
 - '1996-12-18T12:28:28' '1978/03/12 23:28:59.29' 'Mar 2, 1993 11:18:17.287 p.m. PDT'
 - '1995-008T18:28:12' '1993-321//12:28:28.287'
 - '2451515.2981 JD' 'jd 2451700.05 TDB'
 - '1988-08-13, 12:29:48 TDB' '1992 June 13, 12:29:48 TDT'
 - » **Requires the LSK kernel**
- **Spacecraft Clock String to numeric Ephemeris Time**
 - **SCS2E (*scid*, *string*, *ET*)**
 - » **Converts SCLK strings consistent with SCLK parameters. For example:**
 - '5/65439:18:513' (VGR1), '946814430.172' (MRO), '1/0344476949-27365' (MSL)
 - » **Requires a SCLK kernel and the LSK kernel**
