# Time Systems and Kernels

Navigation and Ancillary Information Facility

- Time inputs to and outputs from user's programs are usually **strings** representing epochs in these three time systems:
  - Ephemeris Time (**ET**, also referred to as Barycentric Dynamical Time, **TDB**)
  - Coordinated Universal Time (**UTC**). This is the default for calendar strings.
  - Spacecraft Clock (**SCLK**)
- Time stamps in kernel files, and time inputs to and outputs from SPICE routines reading kernel data and computing derived geometry, are double precision **numbers** representing epochs in these two time systems:
  - Numeric Ephemeris Time (TDB), expressed as ephemeris seconds past J2000
    - » J2000 = 2000 Jan 1 12:00:00 TDB
  - Encoded Spacecraft Clock, expressed as clock ticks since the clock start
- **SPICE** provides routines to convert between these string and numeric representations.
- A time string used as an argument in a SPICE API must be provided in quotes.
  - Fortran, Matlab and IDL: use single quotes
  - C: use double quotes

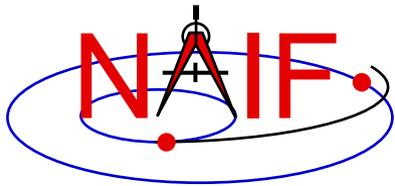

# Converting Time Strings

Navigation and Ancillary Information Facility

- **UTC, TDB, or TDT (TT) String to numeric Ephemeris Time**
  - **STR2ET ( *string*, *ET* )**
    - » Converts virtually any time string format known to the SPICE Time subsystem, excepting SCLK.
    - » Examples of acceptable string inputs:
      - '1996-12-18T12:28:28'
      - '1978/03/12 23:28:59.29'
      - 'Mar 2, 1993 11:18:17.287 p.m. PDT'
      - '1995-008T18:28:12'
      - '1993-321//12:28:28.287'
      - '2451515.2981 JD'
      - 'jd 2451700.05 TDB'
      - '1988-08-13, 12:29:48 TDB'
      - '1992 June 13, 12:29:48 TDT'
    - » Requires the LSK kernel

These example inputs all use the single quote required by Fortran, IDL and Mice APIs. Use double quotes for C APIs.

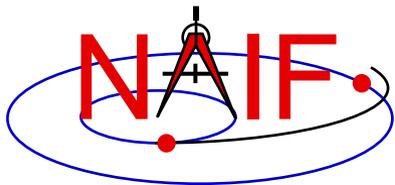

- **Spacecraft Clock String to numeric Ephemeris Time**
  - **SCS2E ( *scid*, *string*, *ET* )**
    - » Converts SCLK strings consistent with SCLK parameters.
    - » Examples of acceptable clock string inputs:
      - '5/65439:18:513' (VGR1)
      - '946814430.172' (MRO)
      - '1/0344476949-27365' (MSL)
    - » Requires a SCLK kernel and the LSK kernel

# Converting Numeric Times

Navigation and Ancillary Information Facility

- **Numeric Ephemeris Time to a string, where the format is Calendar, DOY or Julian Date, and the time system is *UTC*, *TDB* or *TDT***
  - **TIMOUT ( *et*, *fmpic*, **STRING** )**
    - » ***fmpic* is an output time string format specification, giving the user great flexibility in setting the appearance of the output time string and the time system used (*UTC*, *TDB*, *TDT*).**
      - See the next slide for examples of format pictures to produce a variety of output time strings
      - See the TIMOUT header for complete format picture syntax
      - The module TPICTR may be useful in constructing a format picture specification from a sample time string
    - » **Requires LSK Kernel**
- **Numeric Ephemeris Time to Spacecraft Clock String**
  - **SCE2S (*scid*, *et*, **SCLKCH** )**
    - » **Requires the LSK and a SCLK kernel**
    - » **Output SCLK string examples:**
      - 1/05812:00:001 (Voyager 1 and 2)**
      - 1/1487147147.203 (Cassini, MRO)**
      - 1/0101519975.65186 (MEX, VEX, Rosetta)**
